

BEST ROLLING DOORS

Best Rolling Doors, Inc. purchases steel that is produced from a BOF (Basic Oxygen Furnace) mill and an EAF (Electric Arc Furnace) mill. The recycled material content used in each process is as follows:

BOF Mills use:

- 23.0% post consumer recycled material
- 7.3% post industrial recycled material
- 30.0% Total recycled material

EAF Mills use:

- 58.6% post consumer recycled material
- 32.6% post industrial recycled material
- 91.2% Total recycled material

Typically, we purchase approximately 50% of our steel from each type of mill; therefore, on average, our steel products have the following makeup:

- 40.8% post consumer recycled material
- 19.95% post industrial recycled material
- 60.75% Total recycled material

This letter is to certify that the above product/material contains the minimum percentage of recycled material and minimum percentage procured material in a 500-mile radius of manufacturer as noted.

The percentages are based on information received from our vendors and have been represented to Best Rolling Doors Inc. as true and accurate.
