OPERATION
Motor · Chain · Hand Crank · Push-Up

MAX SIZE
60′+ Wide × 30′ High

PRODUCT OVERVIEW

Rolling Security Grille

The **Rolling Security Grille** provides an excellent means of security and crowd control — allowing full visibility and a sleeker aesthetic than solid coiling doors. The open lattice curtain meets and exceeds New York City visibility code requirements, making it ideal for **enclosed retail, shopping malls, airports, train stations, "Smash & Grab" protection, cafeterias, office lobbies, loading docks, and schools**. Available in straight lattice and brick patterns with a wide range of finishes.

Open Lattice Visibility

2.0″ × 9.0″ open curtain openings meet and exceed NYC visibility code — keeping merchandise and branding visible even when closed.

Straight Lattice & Brick Pattern

Available in two curtain patterns — straight lattice for a classic look, or brick pattern for an architectural stepped appearance.

Solid or Hollow Rod

Choose solid rod for maximum strength or hollow rod for a lighter-weight curtain — both available in the full range of standard finishes.

Large Opening Capability

Manufactured to accommodate openings over 60′ wide by 30′ high — suitable for mall entrances, airport concourses, and large commercial spans.

Multiple Operation Types

Motor, chain, hand crank, or push-up operation available based on size, weight, and frequency of use. Battery backup available for power failure protection.

Custom Finishes

Galvanized steel, Mill Aluminum, Clear Anodized, White, Black, Stainless Steel, Galvalume, Prime Painted, and Powder Coated options available.

RETAIL & MALLS
Enclosed retail · shopping malls · boutiques · showrooms

TRANSIT & AIRPORTS
Airports · train stations · transit concourses

COMMERCIAL
Office lobbies · cafeterias · loading docks · schools
